

Capability Statement

Manufacturer supplying state of the art cutting tools, wear parts and precision machining

Core Competencies

Composite Cutter Technology is a manufacturing company that offers cutting tools and precision machined parts designed and manufactured to your specifications or to our unique solutions. We specialize in providing the following:

- Tooling
- Polycrystalline Diamond (PCD) Cutting Tools
- PCD Wear Parts
- Cubic Boron Nitride (CBN) Cutting Tools
- Carbide Cutting Tools
- General Machined Parts
- Machining and Manufacturing Services
- Project Management for Manufacturing Services

Past Performance

- Local municipalities and airports - Develop and manufacture cutting tools for abrasive street cleaning brushes, concrete etching and cutting rebar
- Optical lens manufacturers including prisons and retail– Supply optical lens cutting tools
- Lockheed Martin - Manufacture PCD cutting tools
- Bell Helicopter – Manufacture PCD hole saws
- General Dynamics – Manufacture PCD countersink tools and inserts for A-12 project
- Northrop Grumman - Small Business Innovation Research Program (SBIR) for DoD F-35 developed PCD tipped drills
- Boeing: Manufacture PCD cutting tools for the Osprey
- Various Clients: Provide wear parts and assembly design for manufacturing facilities
- Tools often sold through distributors

Differentiators

- Specialize in unique customized solutions to help our customers improve their manufacturing processes by decreasing downtime and saving money.
- Industry leader developing cutting technology for polycrystalline diamond (PCD) material for nearly 4 decades. We work directly with the diamond manufacturers to improve and develop settings for the material.
- We are superior educators that provide training to other precision manufacturing companies. The training involves mentoring others on design of cutting tools, improving machining processes and advising the parameters for machining.
- Personalized customer service provides transparency to our customers and 24-hour access to our team.
- We excel at handling projects from the R&D stage through production by developing an accurate scope of work, utilizing the most efficient design, providing cost effective materials and aligning ourselves with optimum strategic partners.
